About me

Account Executive turned eager full stack software engineer. I spent 6 years immersed in technology; started selling directly to consumers, and then ultimately to public sector organizations and private enterprise customers. After learning the landscape, I found myself wanting to dive deeper into the product, and so began my career change journey into software development.

Developer Experience

09/2020 - Current **Full Stack Software Developer- Apprentice**

Nashville Software School, Nashville, TN

Intensive full-time 6-month software development program creating applications individually and in team-based projects in a Linux environment.

- Worked in remote environment utilizing Slack and Zoom
- Built single page applications with HTML5, CSS3, JavaScript and Bootstrap
- Learned functional React including hooks and styling including React-Bootstrap
- Git and GitHub for version control
- Tech Stack: Python/ Django; React.js; JavaScript; HTML5; CSS3; SQL fundamentals

Projects:

Bourbon Log | Individual project | See Github client [here](#) and server [here](#)

Full stack, Single page, data-driven application for bourbon lovers who seek to simplify the way they track their tasting notes. It eliminates the disparate notes across notebooks, napkins and phones, and consolidates them into a fun, easy to use format where their 'logs' are accessible and meaningful.

- Built with React, React-Bootstrap, and React-chartsjs-2
- Full CRUD functionality using JS Fetch API
- Back-end built on Django/Python using ORM

Holiday Road | Group project | See Github [here](#)

This application creates a travel itinerary for an end-user. Built with the use of local and remote API's to perform asynchronous fetch calls to pull data. Then dispatching the selection click and change events by using event hubs for decoupling.

- Vanilla Javascript application built in a Scrum framework
- Performed daily stand-ups to review each sprint
- Concluded project with a demonstration and retrospective

Rare | Group project | See Github [here](#)

Publishing platform/ social application that allows authenticated users to interact in a social forum by creating posts, associated tags and categories to their posts for relevance and filtering, and create comments on each other's posts in order to interact directly with each other. **This project is meant to run simultaneously with the Server-Side Repo found [here](#)*

- Backend built with Python and SQLite3
- Client side built with React
- Built using Agile principles in a SCRUM framework
- Completed project with a sprint review and retrospective

Professional Experience
