ABOUT ME

Prior to beginning my journey into software development I had risen through the ranks as a Graphic Designer starting as a production artist, moving to a team lead and finally a production manager. At that point I realized I had hit a wall in future growth and with some research I learned more about software development and became very interested and passionate about coding and development. As a software developer I can use my resources as a graphic designer to help me stand out more and give even more to a future employer. I feel all the years of graphic design and management experience has led me to be a unique asset as a software developer and I can't wait to enter into the field of software development.
